# Topic Modeling Science

Chris Murdock

## Why Science?

- Peer-reviewed journal and one of the world's top academic journals
  - Less than 7% of submitted papers are published

#### Why Science?

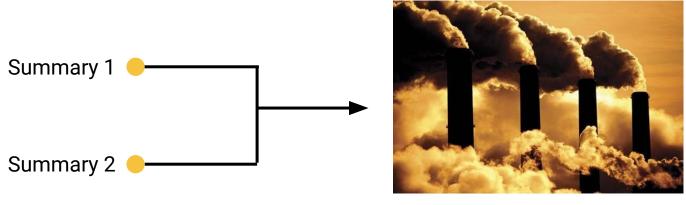

- Peer-reviewed journal and one of the world's top academic journals
- Unlike most scientific journals, Science covers all scientific disciplines

#### Objective

Can we use summaries to find topics or overarching themes? If so, what information can we take away about how topics trend over time?

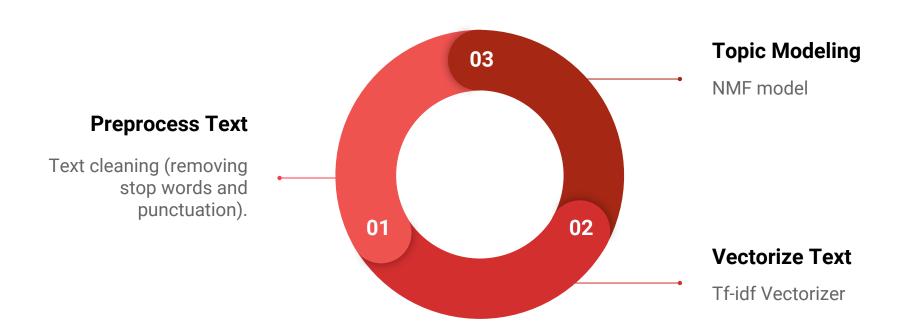

**Global Warming** 

### Analysis Pipeline

Scrape articles from Science's website from 2001-present (~35,000 articles)

- Article summaries, titles and year published were loaded into MongoDB

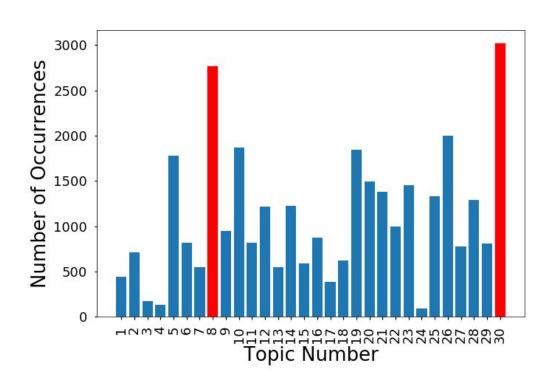

### Analysis Pipeline

### Topics from 2001-2016

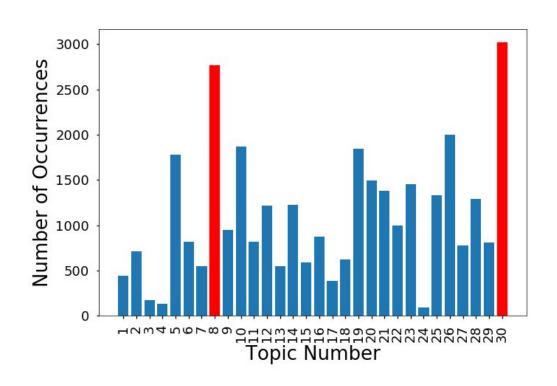

- 33,000 articles narrowed down to 30 topics
- Each document assigned to a topic

#### Topics from 2001-2016

- 33,000 articles narrowed down to 30 topics
- Each document assigned to a topic

#### Topics from 2001-2016

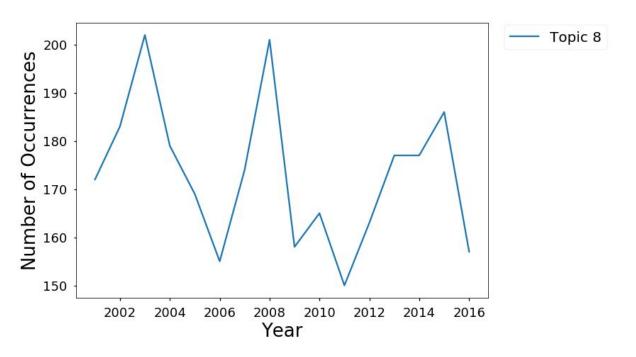

#### Main Topics:

8 - material electron structure magnetic use field temperature surface high property

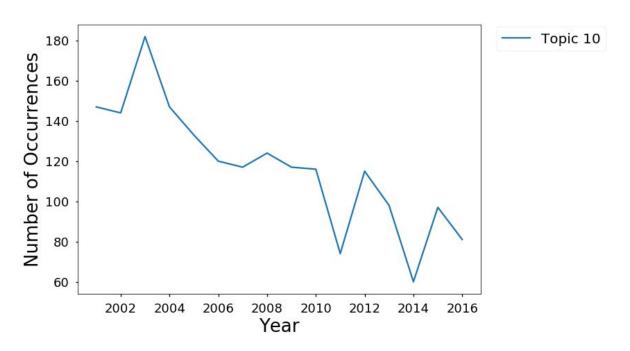

30 - state world united united state country health china nation people public

#### Trends in Topics

material electron structure magnetic use field temperature surface high property

#### **Downward Trends**

protein membrane signal bind receptor complex structure domain pathway kinase

#### Future Steps

Collect more articles to look at topic trends over decades.

- Look at topics for a given year
  - o 2017 main topic:
    - science research scientist u.s world trump president new government agency
